Education

Indiana University, B.S. in Cybersecurity and Global Policy Dec 2026

Certifications

CompTIA Security+ (SY0-701) Oct 2025

Technical Skills

- **Languages & AI/ML:** Python, PyTorch, Hugging Face, LLM fine-tuning, AI agent development
- **Security Tools & Practices:** Splunk, Nessus, GoPhish, MITRE ATT&CK, ServiceNow, OWASP Top 10, incident response playbooks, vulnerability assessment

Professional Experience

Cybersecurity Engineer Intern, Eli Lilly and Company – Indianapolis, IN May 2026

- Designed and built AI-powered security tooling and automation for enterprise threat detection and incident response, embedding security requirements into agent workflows from inception; projected to save 683 hours per month once automation is live.
- Authored security playbooks and standards to govern AI-assisted security operations, standardizing incident response procedures and streamlining resolution across 1,367 cybersecurity platform tickets in a single month.
- Developed and evaluated AI agents supporting security operations – including review of output reliability and automation boundaries – handling 175 RITMs per month; competed in an internal hackathon focused on security innovation.

Security Solution Specialist, ByteShield Solutions – Bloomington, IN July 2025

- Performed vulnerability scans using Nessus on client networks and systems, identifying and reporting an average of 35+ high-risk findings per engagement with a 95% remediation follow-up rate.
- Conducted **security audits** of firewalls, endpoints, and network policies, reducing unauthorized access attempts by 40%.
- Designed and executed phishing simulations using GoPhish, training end-users and achieving a 45% reduction in click-through rates over three campaign cycles.

Volunteer Work

Minority Engineering Program Indianapolis Mentor (MEPI), Dec 2024

- Guided high school students through lab activities, improving technical competency and problem-solving skills.

Cybersecurity Club Member, Indiana University Sept 2024

- Participating in lab exercises on vulnerability scanning, password cracking, and Cross-site Scripting.

Projects

GRC Portfolio Aug 2026

- **Tools:** GitHub, SANS Framework
- Built scalable templates for control frameworks, gap analysis, risk assessments, and policies.

Enterprise Cybersecurity Chatbot May 2026

- **Tools:** ServiceNow, MITRE ATT&CK, Microsoft 365, Claude Sonnet
- Designed and tested an AI assistant for support ticket triage and user security question resolution, evaluating model output reliability and integration security.

AI Hackathon – Large Language Model Development May 2025

- **Tools:** Python, PyTorch, Hugging Face
- Collaborated with a team of 4 to build and fine-tune an LLM for text classification.

SIEM-Based Threat Detection & Incident Response Lab Feb 2025

- **Tools:** VMware Workstation, Splunk Free, Windows/Linux endpoints
- Configured Splunk dashboards to monitor endpoint logs and detect suspicious activity.
